Cloud computing

Definition?

Exemples?

Definition

“ Le ***cloud computing***, abrégé en ***cloud*** (« le Nuage »), ou l’**informatique en nuage** (ou **nuagique**) ou encore l’**infonuagique** (au Québec), est l'exploitation de la puissance de calcul ou de stockage de serveurs informatiques distants par l'intermédiaire d'un réseau, généralement Internet.

Ces serveurs sont loués à la demande, le plus souvent par tranche d'utilisation selon des critères techniques (puissance, bande passante, etc.) mais également au forfait. “

http://fr.wikipedia.org/wiki/Cloud_computing

Definition

“Selon la définition du National Institute of Standards and Technology (NIST), le *cloud computing* est l'accès via un réseau de télécommunications, à la demande et en libre-service, à des ressources informatiques partagées configurables.

Il s'agit donc d'une délocalisation de l'infrastructure informatique. “

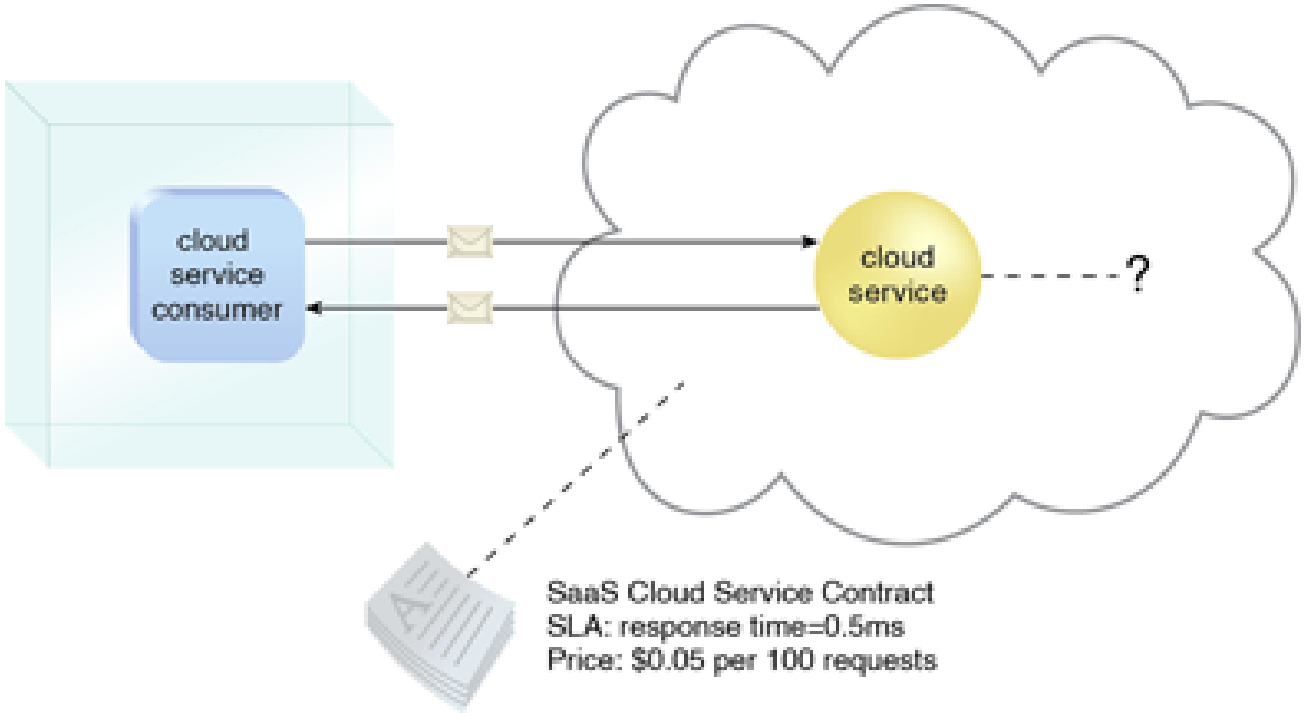
Modèles de prestation

- Software as a Service (SaaS)
  - Data as a Service (DaaS)
- Platform as a Service (Paas)
- Infrastructure as a Service (IaaS)

Software as a Service (SaaS)

Software à la demande
Déployé à travers le réseau/Internet



SaaS - Examples

Dropbox

Data as a Service (DaaS)

- Données fournie à la demande
  - **Extraire** des données
    (BD, Data feeders, Social media, Open Data)
    - Social data (twitter), geo data, rss feeds, …
  - **Transformer** données / Augmenter les données
  - **Délivrer/Visualiser** données

DaaS - Examples

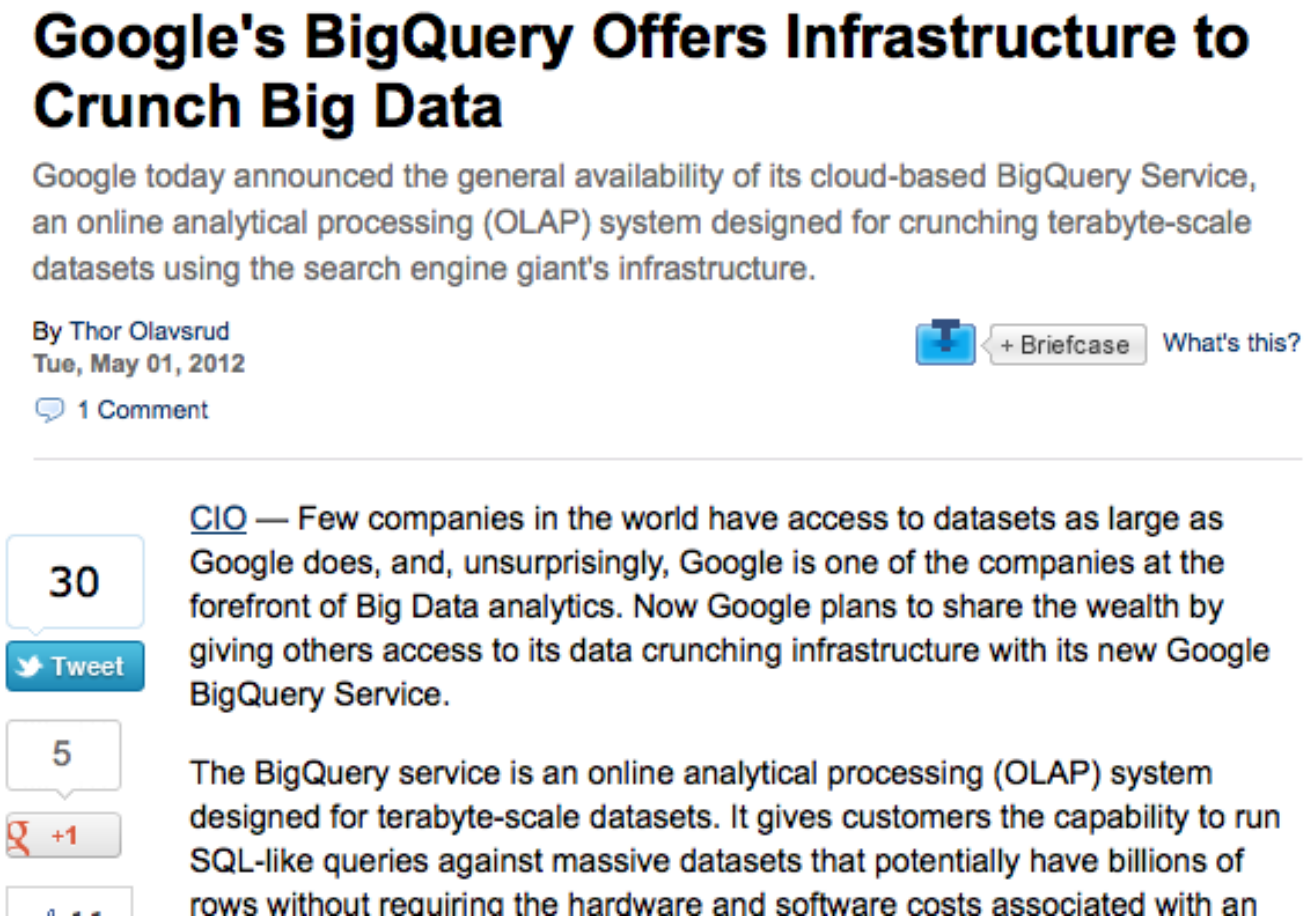
DaaS – Google BigQuery Service



Google's BigQuery Offers Infrastructure to Crunch Big Data

Google today announced the general availability of its cloud-based BigQuery Service, an online analytical processing (OLAP) system designed for crunching terabyte-scale datasets using the search engine giant's infrastructure.

CIO — Few companies in the world have access to datasets as large as Google does, and, unsurprisingly, Google is one of the companies at the forefront of Big Data analytics. Now Google plans to share the wealth by giving others access to its data crunching infrastructure with its new Google BigQuery Service.

The BigQuery service is an online analytical processing (OLAP) system designed for terabyte-scale datasets. It gives customers the capability to run SQL-like queries against massive datasets that potentially have billions of rows without requiring the hardware and software costs associated with an

Modèles
De déploiement

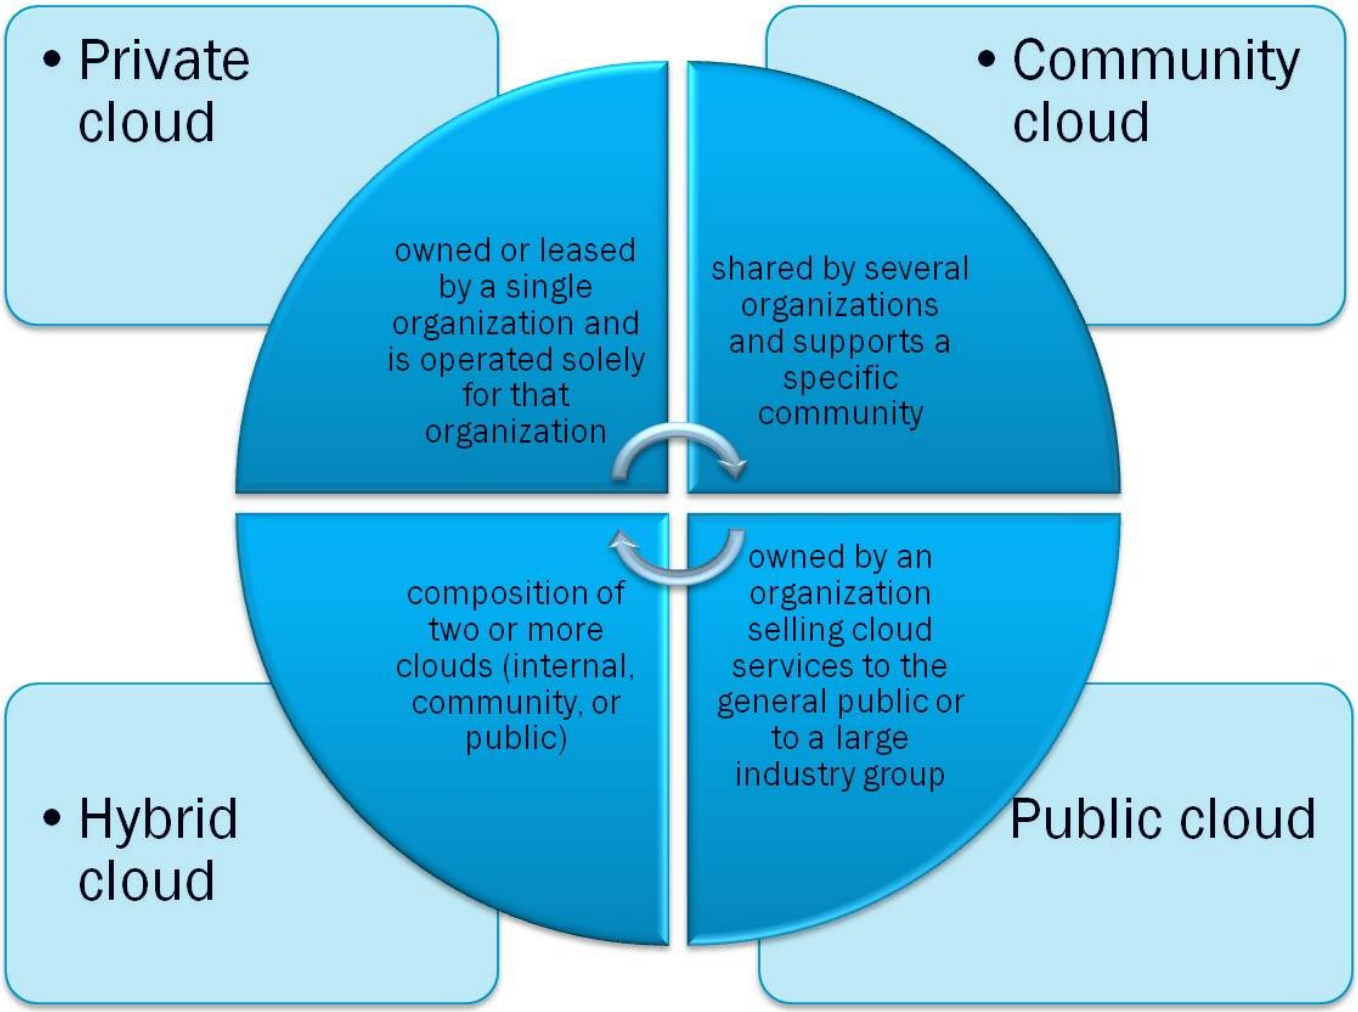
Modèles de déploiement

- **Cloud privé**
  - Expressément pour une organisation donnée
  - Géré par l'organisation ou un tiers
  - Délivré en interne ou en externe

- **Cloud de Communauté**
  - Partagé par plusieurs organisations
  - Supporte une communauté spécifique
  - Géré par l'organsiation ou un tiers
  - Délivré en interne ou en externe

- **Cloud Public**
  - Disponible pour le public en généraé
  - Détenu par un fournisseur

- **Cloud Hybride**
  - Composition de différents types de cloud (privé, communauté, public)
  - Relié entre eux par des technologies standards



• Private cloud
owned or leased by a single organization and is operated solely for that organization
• Community cloud
shared by several organizations and supports a specific community
• Hybrid cloud
composition of two or more clouds (internal, community, or public)
Public cloud
owned by an organization selling cloud services to the general public or to a large industry group

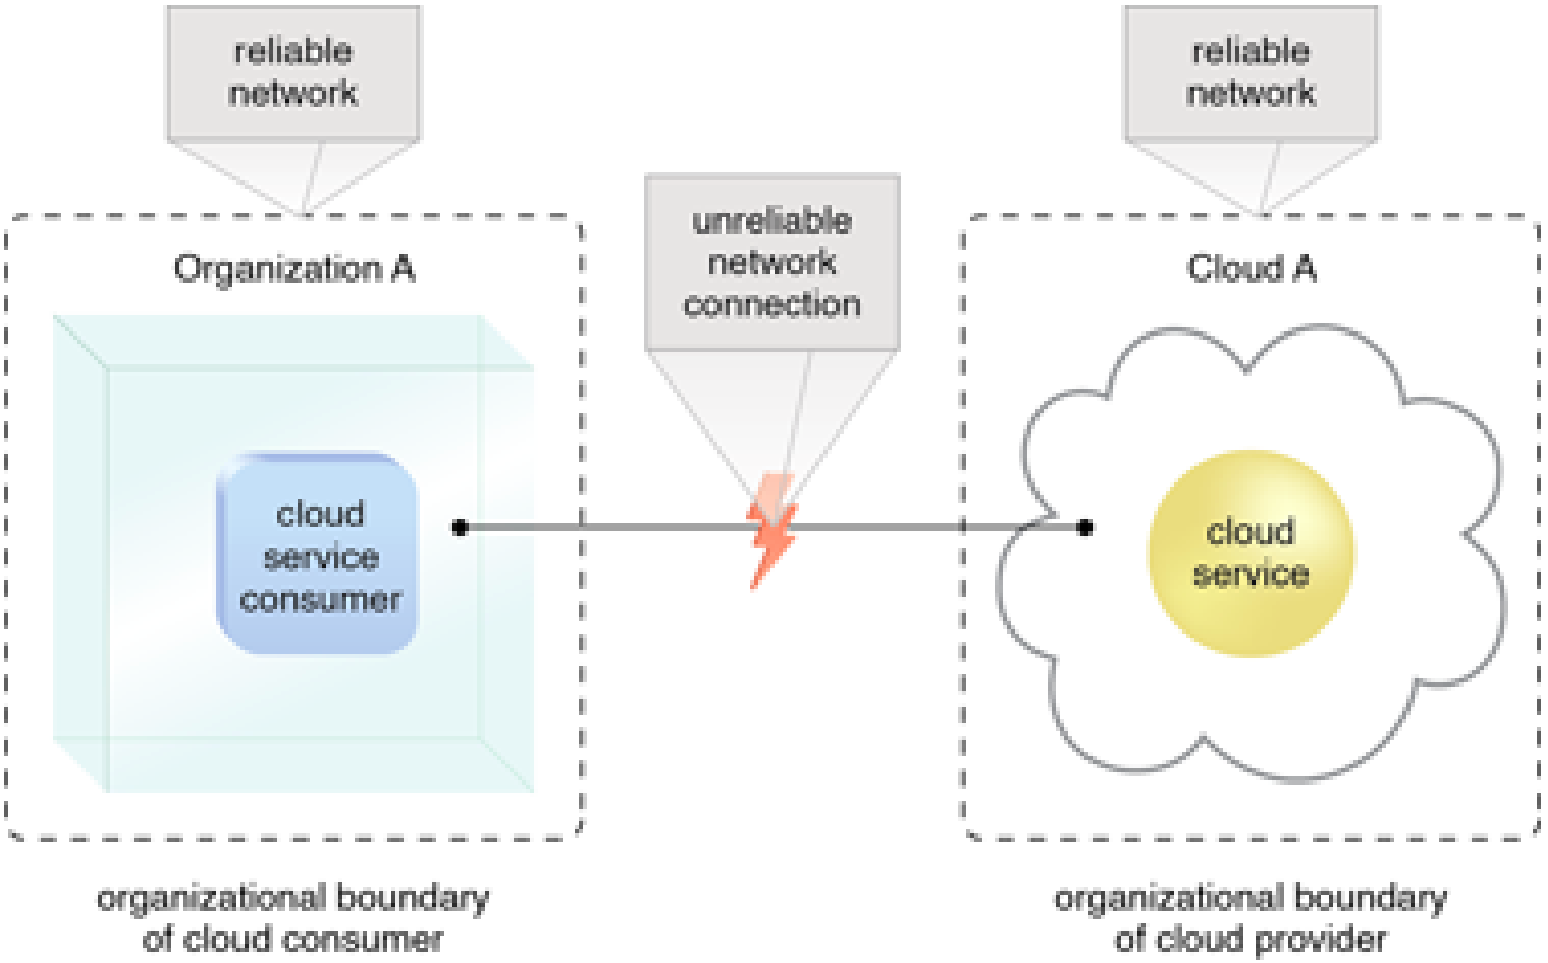
Risques?

Cloud computing

- Risques Physiques
- Risques Légaux
- Risques – qualité / contrôle (SLA)

Risques physiques: Réseau



Risques Légaux

- Stockage délocalisé
  - Lois qui s'appliquent:
    - Pays du fournisseur
    - Pays où sont physiquement stockées les données
    - Pays où est stocké le backup
    - Pays du client (organisation)

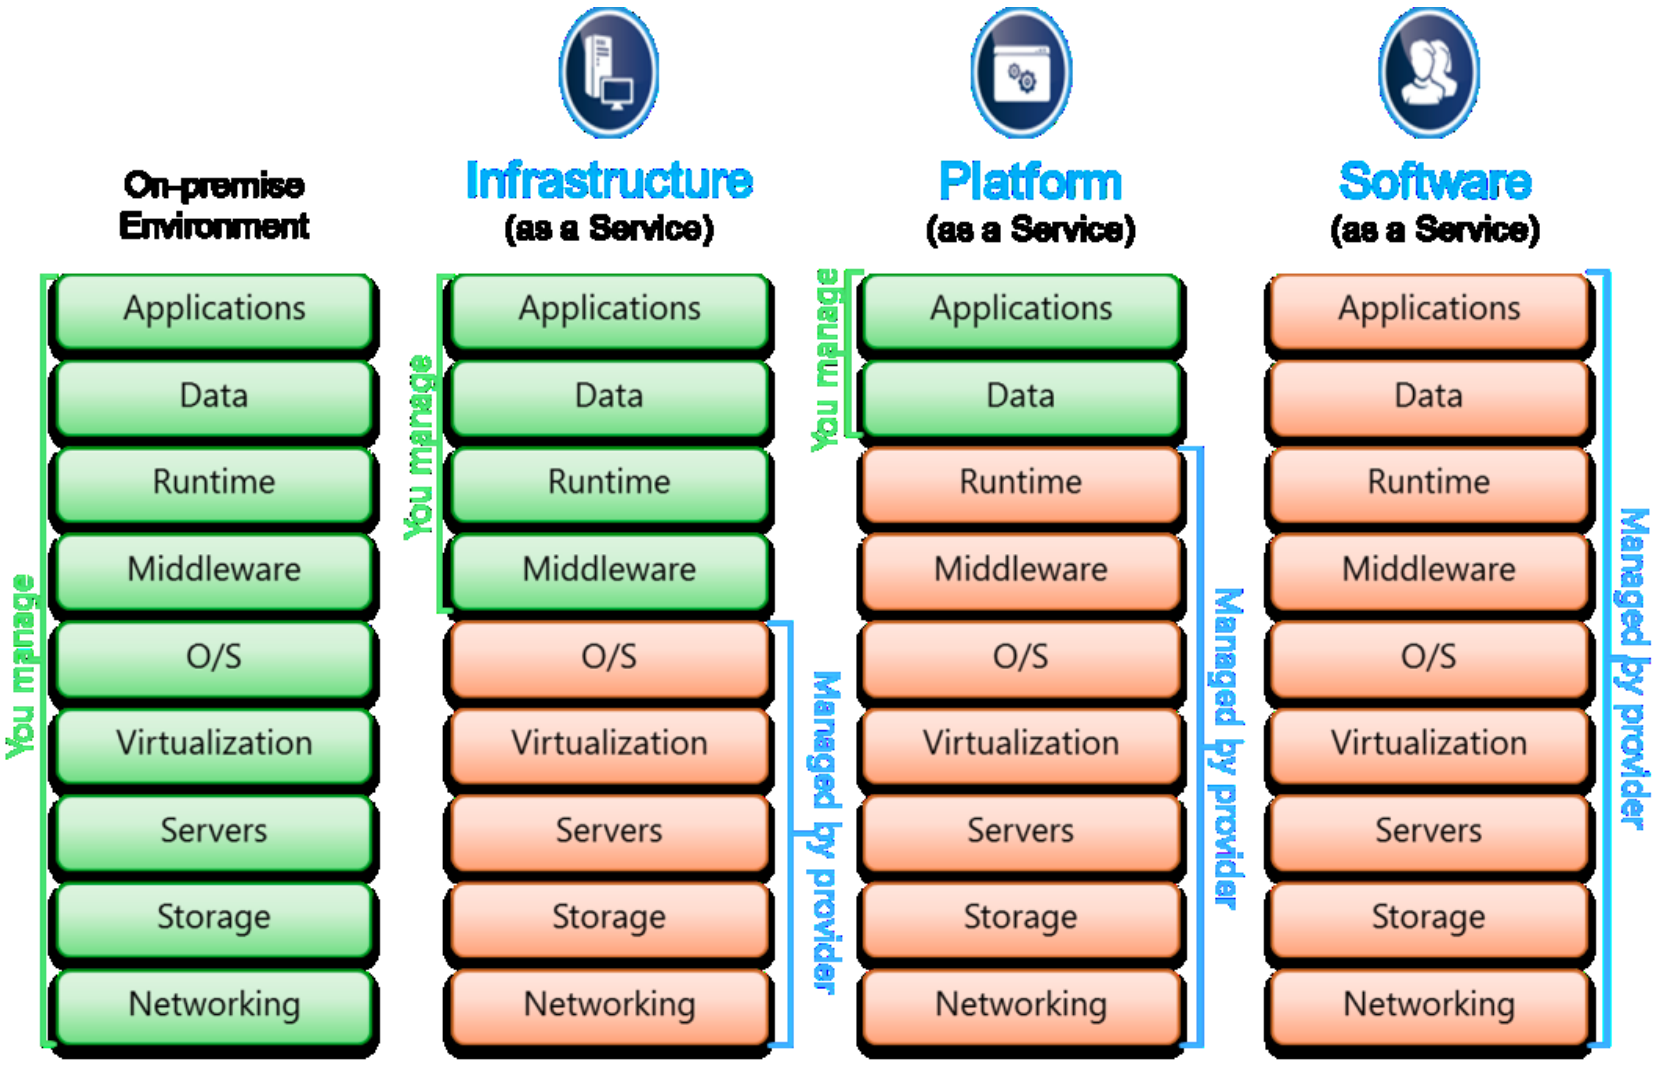
Microsoft 'must release' data held on Dublin server

29 April 2014 | Technology

Risques qualité / contrôle

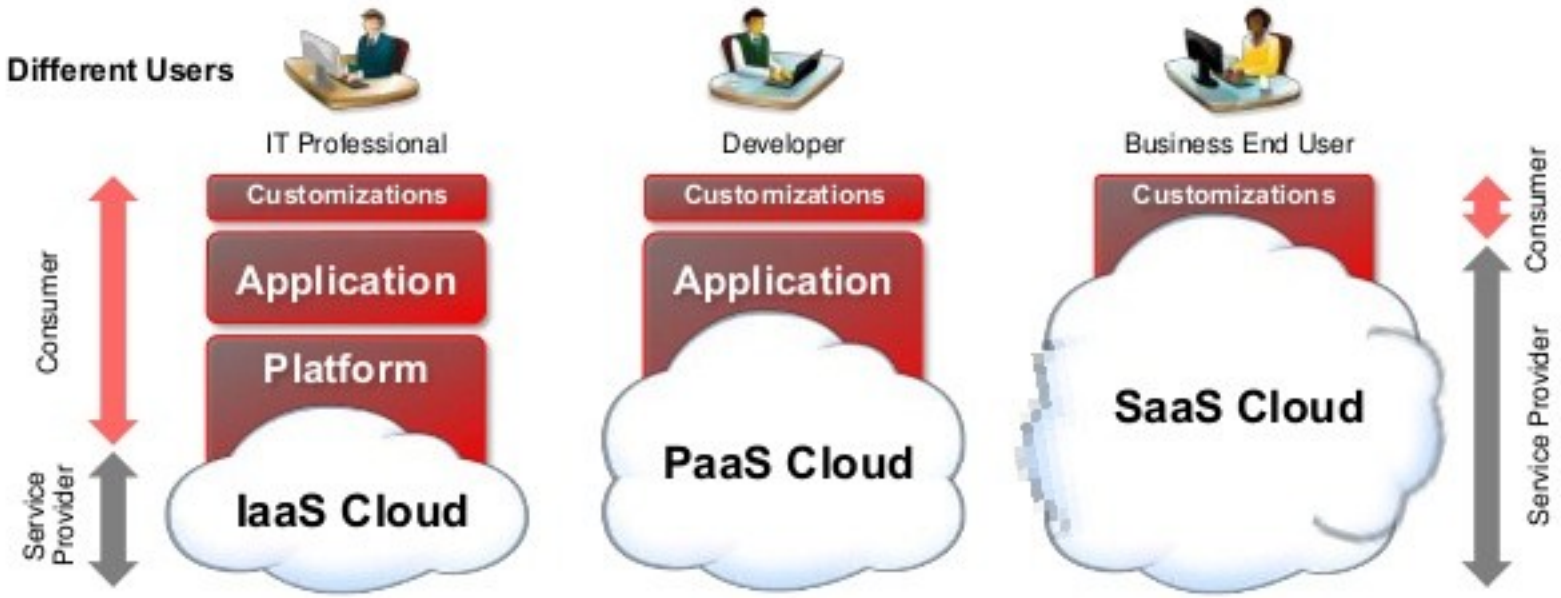
- Service Level Agreement:
  - Qualité du service fourni
    - Disponibilité
    - Mises à jour de sécurité
    - Fiabilité
- Contrôle – délocalisé chez le fournisseur

Responsabilités



How is Cloud Computing Security Different?

Consumer-Provider Security Responsibilities



Exemples

Megaupload file-sharing site shut down

8 March 2012 | Technology | 688

Megaupload, one of the internet's largest file-sharing sites, has been shut down by officials in the US.

The site's founders have been charged with violating piracy laws.

Federal prosecutors have accused it of costing copyright holders more than $500m (£320m) in lost revenue. The firm says it was diligent in responding to complaints about pirated material.

In response, the hackers group Anonymous has targeted the FBI and US Department of Justice websites.
